

Mia practises the piano every day for 40 weeks. Leo practises the piano 6 times each week for 45 weeks. How many more times does Mia practise than Leo?

Method

First work out how many bananas each person eats altogether.

Remember there are 7 days in a week, so if someone eats one banana every day, multiply the number of weeks by 7. Sometimes, a question may say they do something every school day - this means monday - friday only.

Then work out the other person's total by multiplying the number eaten each week $\times$ number of weeks.

Finally, subtract the smaller total from the larger total to find the difference.

Example: Wyatt eats 1 banana each day for 52 weeks.

$$52 \times 7 = 364 \text{ bananas}$$

Eva eats 6 bananas each week for 60 weeks.

$$6 \times 60 = 360 \text{ bananas}$$

$$364 - 360 = 4 \text{ bananas}$$

So Wyatt eats 4 more bananas than Eva.

Noah walks his dog every day for 36 weeks. Isla walks her dog 5 times each week for 48 weeks. How many more times does Noah walk his dog than Isla?

Jack does 1 maths puzzle every day for 30 weeks. Sophie does 4 maths puzzles each week for 50 weeks. How many more puzzles does Jack do than Sophie?

Amir eats an apple every day for 44 weeks. Grace eats an apple 6 times each week for 50 weeks. How many more apples does Amir eat than Grace?

Ruby reads a chapter of her book every day for 32 weeks. Oscar reads a chapter 5 times each week for 42 weeks. How many more chapters does Ruby read than Oscar?

Freddie cycles to school every day for 28 weeks. Ava cycles to school 4 times each week for 45 weeks. How many more times does Freddie cycle to school than Ava?

Lily feeds her fish every day for 26 weeks. Ben feeds his fish 6 times each week for 28 weeks. How many more times does Lily feed her fish than Ben?

Ethan practises football every day for 35 weeks. Maya practises football 6 times each week for 40 weeks. How many more times does Ethan practise than Maya?

Zara completes a spelling exercise every day for 24 weeks. Harry completes 5 spelling exercises each week for 30 weeks. How many more spelling exercises does Zara complete than Harry?

Sam drinks a glass of milk every day for 48 weeks. Ella drinks a glass of milk 6 times each week for 55 weeks. How many more glasses of milk does Sam drink than Ella?

Answers: 10, 12, 10, 8, 14, 16, 14, 5, 18, 6
